

SG6 SILVERGUARD PROXIMITY WAND

The SilverGuard RFID Proximity Wand is the only RFID Proximity Stainless Steel Wand in existence in the world today. It is constructed from stainless steel to provide for unsurpassed durability and for operation in harsh environments. It is incredibly easy to operate - by just pressing a button: it can rapidly read an RFID tag within its scan area without errors. As long as the RFID tag is within the Wand scan area, it can be read without physical contact. It will even read an RFID tag embedded in concrete walls. The SilverGuard RFID Proximity Wand is very versatile - it can download its data directly to a Printer, a PC, a Modem or a Remote Mobile Collector.

- Reads 125KHZ RFID proximity checkpoints of varying sizes
- Downloads via the Computer Transfer Station to produce a variety of management reports
- High tensile stainless steel housing (tamperproof, water and shock resistant)
- Long life lithium battery: 3volts battery pack User replaceable battery
- Low battery light indicator
- Capacity: 5000 reads in all formats
- Visual and audible confirmation
- Operating temperature: -30°to 80°Celsius
- Memory: 128K SRAM, Processor: DS5001@11MHZ
- Checkpoints can be embedded behind any non-metallic surface
- Suitable for all environments including, Malls, Corrections, Border Patrols, Hospitals, Property Management etc
